

HMI606T 5.6" Windows® CE Touchscreen Computer

*Versatile Open Platform Touchscreen Operator Interface
in a Small, Affordable Package*

Ivory Series

Another Smart HMI Solution from the Operator Interface Experts...

Maple Systems is pleased to introduce the Ivory Series HMI606T Windows® CE™ Touchscreen Computer. This six inch model combines the convenience of a reliable and affordable touchscreen operator interface with the power and versatility of an open platform Microsoft® Windows® CE™ computer.

Why an open platform CE computer?

In a word -- **versatility**. Because the Ivory Series is powered by Windows CE using an open platform, your programming possibilities are endless:

- **You choose your HMI software.** No matter what your application, you are no longer restricted by the limitations of any specific HMI configuration software. Instead, you have the power to choose any Microsoft® Windows® CE™ 4.2-compatible HMI software that best meets the needs of your specific application.
- **Connect to the controllers you use.** Like program features, controller connectivity is a function of the software you choose. There are many third party sources for software (such as InduSoft Web Studio) that provide an extensive list of communication drivers.
- **You can create your own application.** If your application is one that doesn't fit into the function of traditional HMI software, then you can create your own. This opens doors that just aren't possible with traditional HMIs.

What are the advantages to using the Ivory Series' hardware platform?

- **It's affordable.** The Ivory Series is a low-cost Windows® CE™ touchscreen computer that meets Maple Systems high standards of quality

backed by a ***two-year warranty***. Quantity discounts are available.

- **It's packed with hardware.** The Ivory Series has a 200Mhz RISC-based microprocessor with built-in graphics accelerator to ensure fast operation. The 32Mb of Flash and 64Mb of DRAM memory provide the ability to store applications and data. You can also use a CompactFlash card for additional memory storage. Two USB ports are included to allow easy connection to external devices like a mouse or keyboard.
- **It has a small footprint.** The Ivory Series has a slim-fit design with a 2" nominal depth enclosure to allow you to use a compact screen in tight spaces.

What HMI software do you recommend?

We recommend **InduSoft**. This software has been tested extensively with the Ivory Series, and we found that Indusoft has features and support that live up to our high quality standards.

***Power, performance and versatility that meets all of your needs --
and fits your budget!***
